

Collaboration and Website Policy

APh 162

Collaboration:

At the end of this course, we expect that you will be familiar with major topics in experimental biophysics and be experts in the field of your project, as well as excellent at both data and image analysis.

To that end, we expect you to try to do everything in this course by yourself **for at least an hour** before seeking help from a friend. You may, of course, attend sessions and office hours wherever you are in your analysis. Your work must be your own, so when you get help from someone, be sure that what you put on your website is **yours**. And as always, follow the Honor Code.

Websites:

Each of you should have your own website, since each of you will be doing your own work for the first four weeks. For the projects, the website is not necessary: we will be grading hand-written notebooks.
